

## ULTRASOUND ELASTOGRAPHY NOW AVAILABLE AT JACKSON HVI!

**WHO:** Patients with a history or symptoms of fatty liver, fibrosis, or cirrhosis.

**WHAT:** Elastography is used to diagnose liver disease, stage liver fibrosis, and evaluate the liver's response to treatment.

**HOW:** A transducer (handheld wand) emits sound waves to produce an image of the liver. This test is short, noninvasive, and pain-free. The only preparation required is 8 hours of fasting before the test.

**WHERE:** Jackson Township, 27 South Cooks Bridge Road,  
Suite 1-6, Jackson Township, NJ 08527
